

CTN-200 Series

ULTRA HIGH POWER BROADBAND BOMB JAMMER

(20 - 3000 MHz)

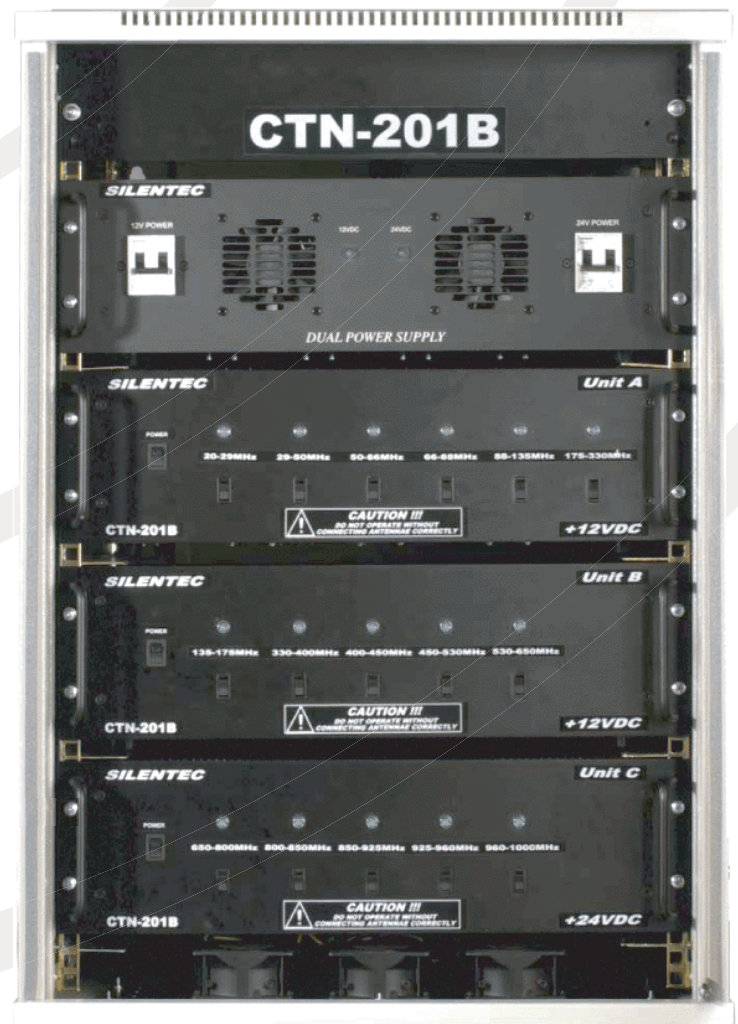

We offer different options in this range of special bomb jamming systems. Our jammers cover the entire and complete spectrum simultaneously. No "gaps" are left uncovered.

Each system is designed to block all RF links (signals) between receiver and transmitter in predetermined areas. As a result, all RF wireless devices operating within the specific spectrum of frequencies contained within each system (for example between 20-3000 MHz), will be completely paralyzed.

These jammers cover all general communication frequency bands and standards, for example Walky-Talky, Cellular (AMPS, GSM, HighGSM, CDMA/TDMA, NEXTEL, PCS, DCS, UMTS), Satellite (Thuraya, Iridium), WLAN, GPS, Wi-Fi and etc.

The CTN-200 jamming systems are developed for anti-terror security application, as well as VIP protection in large sensitive locations; and they operate from a main AC power source.

- VIP and convoy protection
- Prison compounds
- Military base installations
- Government building
- Embassies
